

SIDANDA

cocoon type 95% goose down quilt

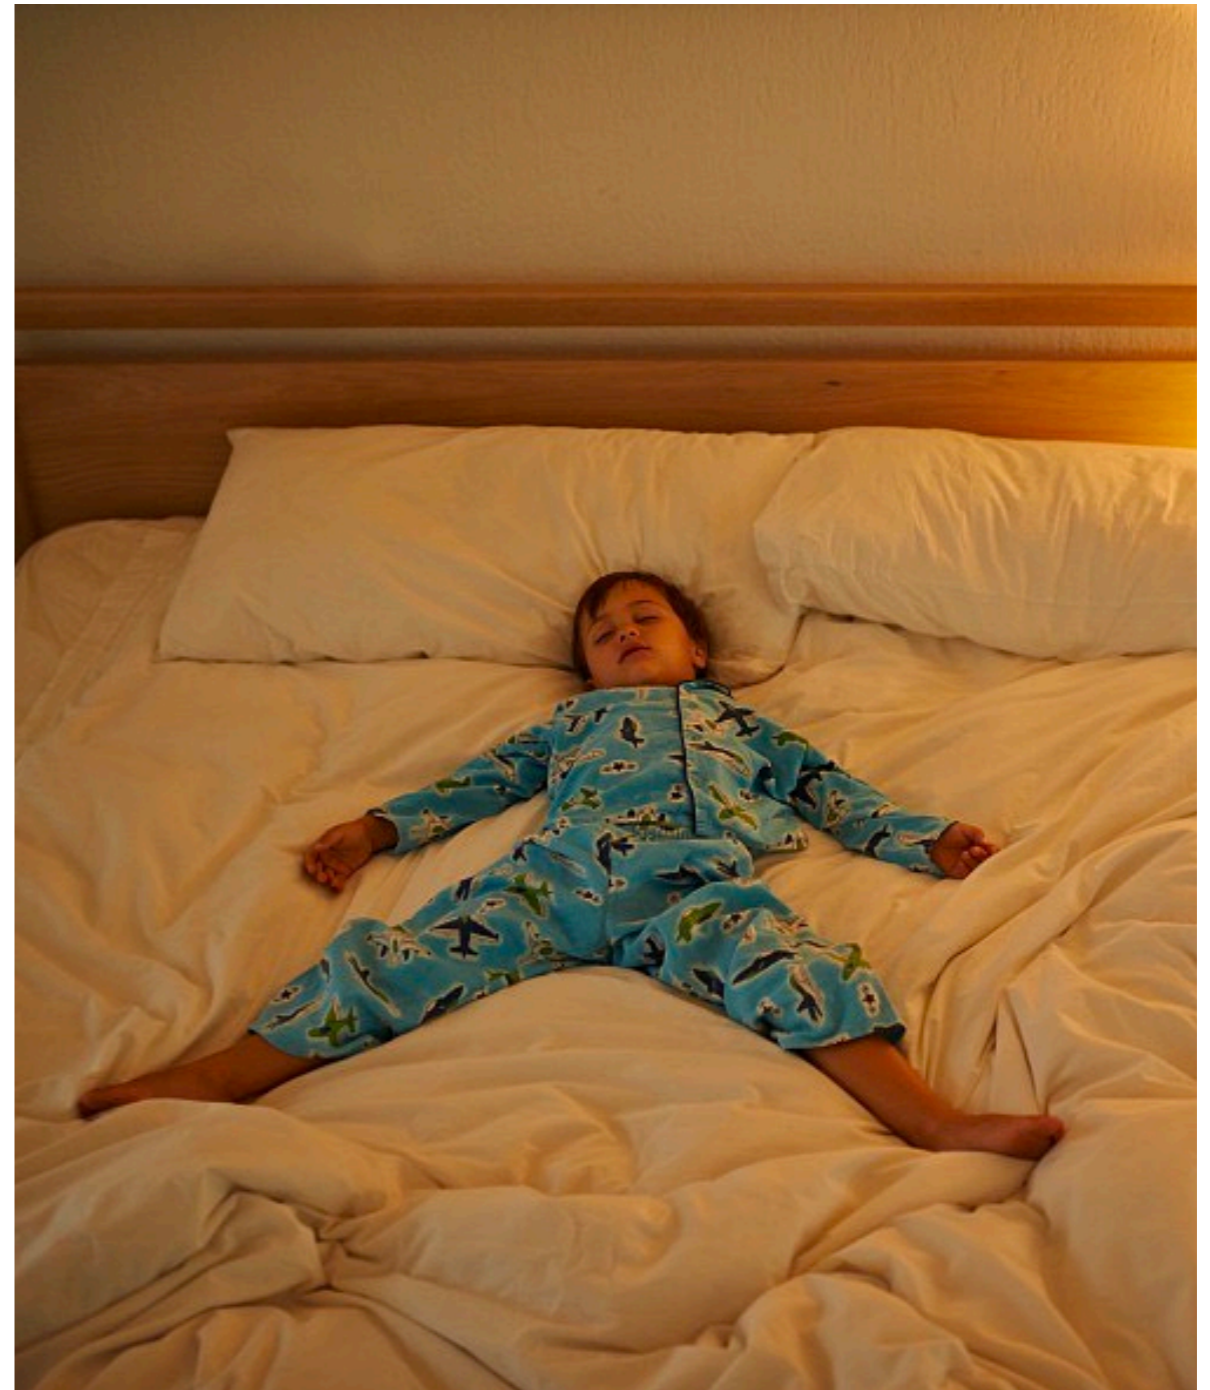

Original intention of product design

- **Based on the problem that children are prone to catching colds by kicking off quilts repeatedly during sleep**

Due to the vigorous metabolism of children, they are more likely to sweat when sleeping. If they are covered with heavy and airtight quilts, they will repeatedly kick off the quilt and turn over and over again, which is more likely to catch colds.

- **Suitable for**

Designed for children aged 4-10, it can effectively improve the habit of sleeping and quilt-kicking prevention for children.

Choose light fluffy 95% large white goose down

- A large amount of air is contained between the gaps of goose down
- Prevent the outside cold air from penetrating rapidly to reach a constant temperature and comfortable state
- It is light and fluffy and does not oppress the child's body
- At the same time, it has excellent moisture absorption and ventilation capability

Unique HEAT-CYCLE retains temperature chamber design

- By simulating the cocoon shape, tightly wrap all parts of the child's body
- Bevel stitch design at shoulder and neck ensures no air leakage when the child turns over
- The chest and the bottom are filled with a certain amount to protect the areas that are easy to catch cold

The quilt is made of imperial tribute cotton satin fabric, which is very soft and skin-friendly

- Cotton material is soft and delicate, safeguarding the baby's sleep.
- Cocoon quilt fabric has passed SGS certification, meeting the US CPSIA (mother and infant grade) standard
- The quilt is free of formaldehyde, aromatic amine and heavy metal components

Cross-border collaboration of cocoon quilts

SPACE × SIDANDA®

NASA联名限定系列

- For the first time, China and the International Space Archives collaborated a quilt core

SIDANDA and ISA (International Space Archives) will bring you a limited series of children's bedding products. The series will integrate many classic NASA elements and will be modernized with scientific and technological means and high-tech materials for the sake of heat preservation.

- Encourage children to explore with creativity across borders

The classic elements of NASA are integrated and reshaped with the quilt core from the perspective of children. The unique and interesting printing design is deeply loved by children.
